

Exocet Diesel Power Restorer

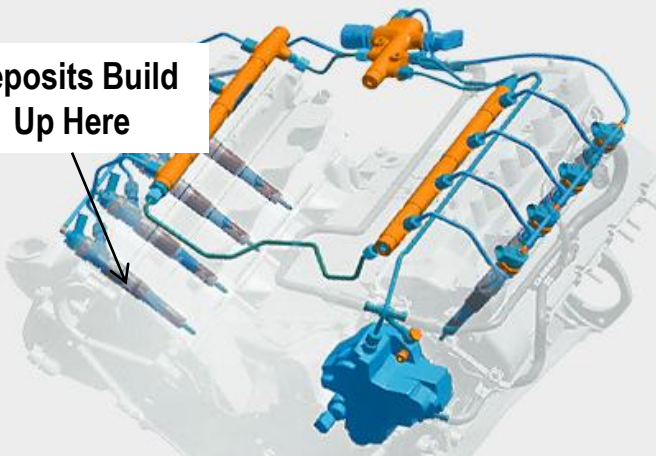

Restores Power That Can Be Lost In Diesel Engines

Modern diesel engines use highly precise injection technology to help deliver great driving performance efficiently and with reduced emissions. Over time, deposits can build up in diesel fuel injection systems - reducing engine power, especially in the presence of biodiesel components. The deposits are often very thin layers of lacquer stuck tenaciously on critical parts that restrict fuel flow. Exocet Diesel Power Restorer is specially formulated to break down and disperse these hard lacquers, bringing back the fuel flow and engine power to optimum levels.

One 200ml bottle of Exocet Diesel Power Restorer treats 100 litres of Diesel

Deposits Build Up Here

Diesel Power Restorer

- Restores Power that can be lost in modern diesel engines
- Works within **one** tankfull of fuel
