

Exocet Gas Oil Extra (XO1248GO)

Problems Are Increasing

In the last 3 years we have had many requests for additives to improve gas oil performance.

It appears that the latest off-road vehicles have been developed on European off road diesel - which is closer in quality to our DERV (BS EN 590). UK Gas Oil has lower cetane number and no lubricity spec compared to DERV.

Although UK poorer gas oil quality is not new, the latest vehicle technology appears to have been "squeezed" to meet lower emission limits. Such a "squeeze" regularly puts stress on fuel quality - and some of the latest engines can run rough.

XO1248GO increases cetane number from 45 to 51

Lubricity agent gives protection

Molecules attach themselves to metal surfaces and help keep sliding surfaces apart to reduce friction and wear

Latest Vehicles Can Run Rough On Gas Oil

Demulsifier Reduces Problems By Promoting Water To Separate

Fuel/water emulsion zone

Without

With

Sharp line between fuel and water layers

Example Black Smoke Reduction

Before

After

Results vary between vehicles

Exocet Gas Oil Extra

For Gas Oil & Diesel

- Better pulling power
- Easier starting
- Smoother running
- Better protection
- Lower fuel consumption
- Lower smoke, particulate & nox emissions
- Reduces sludge and fuel tank contamination
- Fewer water problems

1 litre bottle of Exocet Gas Oil Extra treats 3,000 litres of fuel
